

Exam Procedure

- Follow your technician to the pretesting room for diagnostic tests, then you will be guided to an exam room.
- Your doctor will review your information before seeing you. She will then begin addressing your visual needs by asking you several questions from the doorway of the room, to minimize close contact. **(Note: There will be a recording device utilized throughout your visit, in order for the technicians to confidentially document findings in your chart while keeping at a safe distance in another room.)**
- Your doctor will perform your eye exam and thoroughly review her findings with you.
- After guiding you to the care of the optical team, your doctor will inform them of your visual needs.
